

Physics

- A body falls freely for 10sec Its average velocity during this journey (take $g = 10 \text{ ms}^{-2}$)
 (a) 100 ms^{-1} (b) 10 ms^{-1}
 (c) 50 ms^{-1} (d) 5 ms^{-1}
- Three projectiles A, B and C are projected at an angle of $30^\circ, 45^\circ, 60^\circ$ respectively. If R_A, R_B , and R_C are ranges of A, B and C respectively, then (velocity of projection is same for A, B & C).
 (a) $R_A = R_B = R_C$ (b) $R_A = R_C > R_B$
 (c) $R_A < R_B < R_C$ (d) $R_A = R_C < R_B$
- The component of a vector $\vec{r}$ along x - axis have a maximum value if
 (a) $\vec{r}$ is along + ve x - axis
 (b) $\vec{r}$ is along + ve y-axis
 (c) $\vec{r}$ is along - ve y - axis
 (d) $\vec{r}$ makes an angle of 45° with the x - axis
- Maximum acceleration of the train in which a 50 kg box lying on its floor will remain stationary (Given : Co-efficient of static friction between the box and the trains floor is 0.3 and $g = 10 \text{ ms}^{-2}$)
 (a) 5.0 ms^{-2} (b) 3.0 ms^{-2}
 (c) 1.5 ms^{-2} (d) 15.0 ms^{-2}
- A 12 kg bomb at rest explodes into two pieces of 4 kg and 8 kg piece is 20Na, the kinetic energy of the 8 kg piece is -
 (a) 25 J (b) 20 J
 (c) 50 J (d) 40 J
- Which of the points is likely position of the centre of mass of the system shown in the figure?

- (a) A (b) D
 (c) B (d) C

- Three bodies a ring (R), a solid cylinder (C) and a solid sphere (S) having same mass and same radius roll down the inclined plane without slipping. They start from rest if V_R, V_C , and V_S are velocities of respective bodies on reaching the bottom of the plane, then -
 (a) $V_R = V_C = V_S$ (b) $V_R > V_C > V_S$
 (c) $V_R, V_C < V_S$ (d) $V_R = V_C > V_S$
- Variation of acceleration due to gravity (g) with distance x from the centre of the earth is best represented by ($R \rightarrow$ Radius of the earth)

(a)

(b)

9. A spring is stretched by applying load to its free end The strain produced in the spring is -

- (a) Volumetric (b) Shear
(c) Longitudinal & Shear (d) Longitudinal

10. An ideal fluid flow through a pipe of circular cross section with diameters 5 cm and 10 cm as shown. The ratio of velocities of fluid at A and B is -

- (a) 4:1 (b) 1:4
(c) 2:1 (d) 1:2

11. A pan filled with hot food from 94°C to 86°C in 2 minutes. When the room temperature is 20°C How long will it cool from 74°C to 66°C ?

- (a) 2 minutes (b) 2.8 minutes
(c) 2.5 minutes (d) 1.8 minutes

12. Four rods with different radii r and length ℓ are used to connect to heat reservoirs at different temperature. Which one will conduct most heat?

- (a) $r = 1 \text{ cm}, \ell = 2 \text{ m}$ (b) $r = 1 \text{ cm}, \ell = \frac{1}{2} \text{ m}$
(c) $r = 2 \text{ cm}, \ell = 2 \text{ m}$ (d) $r = 2 \text{ cm}, \ell = \frac{1}{2} \text{ m}$

13. A Carnot engine working between 300 K and 400 K has 800 J of useful work. The amount of heat energy supplied to the engine from the source is -

- (a) 2400 J (b) 3200 J
(c) 1200 J (d) 3600 J

14. A particle executing SHM has a maximum speed of 0.5 ms^{-1} and maximum acceleration of 1.0 ms^{-2} . The angular frequency of oscillation is -

- (a) 2rads^{-1} (b) 0.5rads^{-1}
(c) $2\pi\text{rads}^{-1}$ (d) $0.5\pi\text{rads}^{-1}$

15. A source of sound is moving with a velocity of 50 ms^{-1} towards stationary observer. The observer measures the frequency of sound as 500 Hz. The apparent frequency of sound as heard by the observer when source is moving away from him with the same speed is (Speed of sound at room temperature 350 ms^{-1}) -

- (a) 400 Hz (b) 666 Hz
(c) 375 Hz (d) 177.5 Hz

16. If there are only one type of charge in the universe, then

($\vec{E} \rightarrow$ Electric field, $\vec{ds} \rightarrow$ Area vector)

- (a) $\oint \vec{E} \cdot \vec{ds} \neq 0$ on any surface
(b) $\oint \vec{E} \cdot \vec{ds}$ could not be defined
(c) $\oint \vec{E} \cdot \vec{ds} = \infty$ if charge is inside
(d) None of these

17. An electron of mass m , charge e falls through a distance h meter in a uniform electric field E . Then time of fall -

- (a) $t = \sqrt{\frac{2hm}{eE}}$ (b) $t = \frac{2hm}{eE}$
 (c) $t = \sqrt{\frac{2eE}{hm}}$ (d) $t = \frac{2eE}{hm}$

18. If $\vec{E}_{ax}$ and $\vec{E}_{eq}$ represents electric field at a point on the axial and equatorial line of a dipole. If points are at a distance r from the centre of the dipole, for $r \gg a$ -

- (a) $\vec{E}_{ax} = \vec{E}_{eq}$ (b) $\vec{E}_{ax} = -\vec{E}_{eq}$
 (c) $\vec{E}_{ax} = -2\vec{E}_{eq}$ (d) $\vec{E}_{eq} = 2\vec{E}_{ax}$

19. Nature of equipotential surface for a point charge is -

- (a) Ellipsoid with charge at foci.
 (b) Sphere with charge at the centre of the sphere
 (c) Sphere with charge on the surface of the sphere
 (d) Plane with charge on the surface.

20. A particle of mass 1gm and charge $1\mu\text{C}$ is held at rest on a frictionless horizontal surface at distance 1 m from the fixed charge 2mC If the particle is released, it will be repelled The speed of the particle when it is at a distance of 10 m from the fixed charge -

- (a) 60 ms^{-1} (b) 100 ms^{-1}
 (c) 90 ms^{-1} (d) 180 ms^{-1}

21. A capacitor of 8 F is connected as shown. Charge on the plates of the capacitor -

- (a) 32C (b) 40C
 (c) 0C (d) 80C

22. Four metal plates are arranged as shown. Capacitance between X and Y ($A \rightarrow$ area of each plate, $d \rightarrow$ distance between the plates)

- (a) $\frac{3\epsilon_0 A}{2d}$ (b) $\frac{2\epsilon_0 A}{d}$
 (c) $\frac{2\epsilon_0 A}{3d}$ (d) $\frac{3\epsilon_0 A}{d}$

23. Mobility of free electrons in a conductor is -

- (a) Directly proportional to electron density.
- (b) Directly proportional to relaxation time.
- (c) Inversely proportional to electron density.
- (d) Inversely proportional to relaxation time.

24. Variation of resistance of the conductor with temperature is as shown

The temperature co-efficient (α) of the conductor is -

- (a) $\frac{R_0}{m}$
- (b) mR_0
- (c) m^2R_0
- (d) $\frac{R_0}{m}$

25. Potential difference between A and B in the following circuit -

- (a) 4 V
- (b) 5.6 V
- (c) 2.8 V
- (d) 6 V

26. In the following network potential at 'O' is

- (a) 4 V
- (b) 3 V
- (c) 6 V
- (d) 4.8 V

27. Effective resistance between A and B in the following circuit

- (a) 10Ω (b) 20Ω
(c) 5Ω (d) $\frac{20}{3}\Omega$

28. Two heating coils of resistances 10Ω and 20Ω are connected in parallel and connected to a battery of emf 12 V and internal resistance 1Ω . The power consumed by them are in the ratio -

- (a) 1: 4 (b) 1: 3
(c) 2: 1 (d) 4: 1

29. A portion is projected with a uniform velocity 'v' along the axis of a current carrying solenoid, then -

- (a) The proton will be accelerated along the axis
(b) The proton path will be circular about the axis
(c) The proton moves along helical path.
(d) The proton will continue to move with velocity 'v' along the axis.

30. In the cyclotron, as radius of the circular path of the charged particle increases (ω = angular velocity, v = linear velocity)

- (a) both ω and v increases
(a) ω only increases, v remains constant
(b) v increases, ω remains constant
(c) v increases, ω decreases

31. A conducting wire carrying current is arranged as shown. The magnetic field at 'O'

- (a) $\frac{\mu_0 i}{12} \left[\frac{1}{R_1} - \frac{1}{R_2} \right]$ (b) $\frac{\mu_0 i}{12} \left[\frac{1}{R_1} + \frac{1}{R_2} \right]$
(c) $\frac{\mu_0 i}{6} \left[\frac{1}{R_1} - \frac{1}{R_2} \right]$ (d) $\frac{\mu_0 i}{6} \left[\frac{1}{R_1} + \frac{1}{R_2} \right]$

32. The quantity of a charge that will be transferred by a current flow of 20 A over $1\text{ hour } 30\text{ minutes}$ period is -

- (a) $10.8 \times 10^3 \text{C}$ (b) $10.8 \times 10^4 \text{C}$
 (c) $5.4 \times 10^3 \text{C}$ (d) $1.8 \times 10^4 \text{C}$
33. A galvanometer coil has a resistance of 50Ω and the meter shows full scale deflection for a current of 5 mC . This galvanometer is converted into voltmeter of range $0 - 20 \text{ V}$ by connecting.
 (a) 3950Ω in series with galvanometer
 (b) 4050Ω in series with galvanometer
 (c) 3950Ω in parallel with galvanometer
 (d) 4050Ω in parallel with galvanometer
34. x_1 and x_2 are susceptibility of a paramagnetic material at temperatures $T_1 \text{ K}$ and $T_2 \text{ K}$ respectively, then
 (a) $x_1 = x_2$ (b) $x_1 T_1 = x_2 T_2$
 (c) $x_1 T_2 = x_2 T_1$ (d) $x_1 \sqrt{T_1} = x_2 \sqrt{T_2}$
35. At certain place, the horizontal component of earth's magnetic field is 3.0 G and the angle dip at the place is 30° . The magnetic field of earth at that location.
 (a) 4.5 G (b) 5.1 G
 (c) 3.5 G (d) 6.0 G
36. The process of super imposing message signal on high frequency carrier wave is called -
 (a) Amplification (b) Demodulation
 (c) Transmission (d) Modulation
37. A long solenoid with 40 turns per cm carries a current of 1 A . The magnetic energy stored per unit volume is J/m^3
 (a) 3.2π (b) 32π
 (c) 1.6π (d) 6.4π
38. A wheel with 10 spokes each of length ' L ' m is rotated with a uniform angular velocity ' ω ' in a plane normal to the magnetic field ' B '. The emf induced between axle and the rim of the wheel.
 (a) $\frac{1}{2} N\omega BL^2$ (b) $\frac{1}{2} \omega BL^2$
 (c) ωBL^2 (d) $N\omega BL^2$
39. The rms value of current in a 50 Hz AC circuit is 6 A . The average value of AC current over a cycle is -
 (a) $6\sqrt{2}$ (b) $\frac{3}{\pi\sqrt{2}}$
 (c) Zero (d) $\frac{6}{\pi\sqrt{2}}$
40. A capacitor of capacitance $10\mu\text{F}$ is connected to an AC source and an AC ammeter. If the source voltage varies as $V = 50\sqrt{2}\sin 100t$, the reading of the ammeter is -
 (a) 50 mA (b) 70.7 mA
 (c) 5.0 mA (d) 7.07 mA
41. In a series L.(C)R circuit, the potential drop across L, C and R respectively are 40 V , 120 V and 60 V . Then the source voltage is -
 (a) 220 V (b) 160 V
 (c) 180 V (d) 100 V
42. In a series L.(C)R. circuit an alternating emf (v) and current (i) are given by the equation

$$v = v_0 \sin \omega t, i_0 \sin \left(\omega t + \frac{\pi}{3} \right)$$
- The average power dissipated in the circuit over a cycle of AC is -
 (a) $\frac{v_0 i_0}{2}$ (b) $\frac{v_0 i_0}{4}$
 (c) $\frac{\sqrt{3}}{2} v_0 i_0$ (d) Zero
43. Electromagnetic radiation used to sterilise milk is -
 (a) X-ray (b) Y-ray
 (c) UV ray (d) Radiowaves
44. A plane glass plate is placed over various coloured letters (violet, green, yellow, red). The letter which appears to be raised more.
 (a) Red (b) Yellow
 (c) Violet (d) Green

45. A ray of light passes through four transparent media with refractive index n_1, n_2, n_3 and n_4 as shown. The surfaces of all media are parallel.

If the emergent ray DE is parallel to incident ray AB, then

- (a) $n_1 = n_4$ (b) $n_2 = n_4$
 (c) $n_3 = n_4$ (d) $n_1 = \frac{n_2 + n_3 + n_4}{3}$
46. Focal length of a convex lens is 20 cm and its RI is 1.5. It produces an erect, enlarged image if the distance of the object from the lens is -
 (a) 40 cm (b) 30 cm
 (c) 15 cm (d) 20 cm
47. A ray of light suffers a minimum deviation when incident on an equilateral prism of refractive index $\sqrt{2}$. The angle of incidence is -
 (a) 30° (b) 45°
 (c) 60° (d) 50°
48. In Young's double slit experiment the source is white light. One slit is covered with red filter and the other with blue filter. There shall be -
 (a) Alternate red & blue fringes
 (b) Alternate dark & pink fringes
 (c) Alternate dark & yellow fringes
 (d) No interference
49. Light of wavelength 600nm is incident normally on a slit of width 0.2 mm . The angular width of central maxima in the diffraction pattern is (measured from minimum to maximum).
 (a) $6 \times 10^{-3}\text{rad}$ (b) $4 \times 10^{-3}\text{rad}$
 (c) $2.4 \times 10^{-3}\text{rad}$ (d) $4.5 \times 10^{-3}\text{rad}$
50. For what distance is ray optics is good approximation when the aperture is 4 mm and the wavelength of light is 400nm ?
 (a) 24 m (b) 40 m
 (c) 18 m (d) 30 m
51. The variation of photo - current with collector potential for different frequencies of incident radiation ν_1, ν_2 and ν_3 is as shown in the graph, then-

- (a) $V_1 = V_2 = V_3$ (b) $V_1 > V_2 > V_3$
 (c) $V_1 < V_2 < V_3$ (d) $V_3 = \frac{V_1 + V_2}{2}$

52. The de Broglie wavelength of an electron accelerated to a potential of 400 V is approximately -

- (a) 0.03 nm (b) 0.04 nm
 (c) 0.12 nm (d) 0.06 nm

53. Total energy of electron in an excited state of hydrogen atom is -3.4eV . The kinetic and potential energy of electron in this state -

- (a) $K = -3.4\text{eV}$ $U = -6.8\text{eV}$
 (b) $K = 3.4\text{eV}$ $U = -6.8\text{eV}$
 (c) $K = -6.8\text{eV}$ $U = 3.4\text{eV}$
 (d) $K = 10.2\text{eV}$ $U = -13.6\text{eV}$

54. When electron jumps from $n = 4$ level to $n = 1$ level, the angular momentum of electron changes by -

- (a) $\frac{h}{2\pi}$ (b) $\frac{2h}{2\pi}$
 (c) $\frac{3h}{2\pi}$ (d) $\frac{4h}{2\pi}$

55. A radio - active sample of half - life 10 days contains 1000x nuclei. Number of original nuclei present after 5 days is -

- (a) 707x (b) 750x
 (c) 500x (d) 250x

56. An element X decays into element Z by two - step process.

- (a) X&Z are isobars. (b) X & Y are isotopes.
 (c) X&Z are isotones. (d) X&Z are isotopes.

57. A nucleus of mass 20u emits a γ photon of energy 6MeV. If the emission assume to occur when nucleus is free and rest, then the nucleus will have kinetic energy nearest to

(Take $1u = 1.6 \times 10^{-27} \text{ kg}$)

- (a) 10KeV (b) 1KeV
 (c) 0.1KeV (d) 100KeV

58. Constant DC voltage is required from a variable AC voltage. Which of the following is correct order of operation?

- (a) Regulator, filter, rectifier
 (b) Rectifier, regulator, filter

- (c) Rectifier, filter, regulator
(d) Filter, regulator, rectifier

59. In a transistor, the collector current varies by 0.49 mA and emitter current varies by 0.50 mA. Current gain β measured is -

- (a) 49 (b) 150
(c) 99 (d) 100

60. Identify the logic operation carried out by the following circuit.

- (a) AND (b) NAND
(c) NOR (d) OR

Chemistry

61. The half-life period of a 1st order reaction is 60 minutes. What percentage will be left over after 240 minutes?

- (a) 6.25% (b) 1.25%
(c) 5% (d) 6%

62. Which of the following is not a colligative property?

- (a) Osmotic pressure
(b) Optical activity
(c) Depression
(d) Elevation in Boiling point

63. The contribution of particle at the edge centre to a particular unit cell is,

- (a) $\frac{1}{2}$ (b) $\frac{1}{4}$
(c) 1 (d) $\frac{1}{8}$

64. When an electrolyte is dissociated in solution, the van't Hoff's factor (i) is,

- (a) > 1 (b) < 1
(c) $= 0$ (d) $= 1$

65. Which of the following is incorrect in a galvanic cell?

- (a) Oxidation occurs at anode
(b) Reduction occurs at cathode
(c) The electrode at which electrons are gained is called cathode.
(d) The electrode at which electrons are lost is called cathode

66. A secondary cell is one

- (a) can be recharged
(b) can be recharged by passing current through it in the same direction
(c) can be recharged by passing current through it in the opposite direction
(d) cannot be recharged

67. Osmotic pressure of the solution can be increased by,

- (a) increasing the temperature of the solution
- (b) decreasing the temperature of the solution
- (c) increasing the volume of the vessel
- (d) diluting the solution

68. The amount of current in Faraday is required for the reduction of 1 mol of $\text{Cr}_2\text{O}_7^{2-}$ ions to Cr^{3+} is,

- (a) 1 F
- (b) 2 F
- (c) 6 F
- (d) 4 F

69. For a chemical reaction,

$m\text{A} \rightarrow x\text{B}$, the rate law is $r = k[\text{A}]^2$.

If the concentration of A is doubled, the reaction rate will be,

- (a) Doubled
- (b) Quadrupled
- (c) Increases by 8 times
- (d) Unchanged

70. Schottky defect in a crystal is observed when,

- (a) Unequal number of cations and anions are missing from the lattice.
- (b) Equal number of cations and anions are missing from the lattice.
- (c) An ion leaves its normal site and occupies an interstitial site.
- (d) No ion is missing from its lattice site

71. $3\text{A} \rightarrow 2\text{B}$, rate of reaction $+\frac{d[\text{B}]}{dt}$ is equal to

- (a) $-\frac{3}{2} \frac{d[\text{A}]}{dt}$
- (b) $-\frac{2}{3} \frac{d[\text{A}]}{dt}$
- (c) $+2 \frac{d[\text{A}]}{dt}$
- (d) $-\frac{1}{3} \frac{d[\text{A}]}{dt}$

72. The activation energy of a chemical reaction can be determined by,

- (a) evaluating rate constants at two different temperatures
- (b) changing the concentration of reactants
- (c) evaluating the concentration of reactants at two different temperatures
- (d) evaluating rate constant at standard temperature

73. Which of the following statements is incorrect w.r.t. Physisorption?

- (a) The forces involved are van der Waal's forces.
- (b) More easily liquefiable gases are adsorbed easily
- (c) Under high pressure it results into Multi-molecular layer on adsorbent surface.
- (d) Δ Adsorption is low and + Ve.

74. Sulphur sol contains

- (a) Discrete S-atoms
- (b) Discrete S-molecules
- (c) Large aggregates of S-molecules
- (d) Water dispersed in Solid Sulphur

75. Reactions in Zeolite catalyst depend on,

- (a) Pores (b) Apertures
(c) Size of cavity (d) All of these

76. IUPAC name of the compound

- (a) 1-Bromo but-2-ene (b) 2-Bromo-2-butene
(c) Bromo butene (d) 1-Bromo but-3-ene

77. Replacement of Cl of Chlorobenzene to give phenol requires drastic conditions, but Cl of 2, 4-dinitro chlorobenzene is readily replaced This is because

- (a) $-\text{NO}_2$ group makes the ring electron rich at ortho and para positions
(b) $-\text{NO}_2$ group withdraws electrons from meta position
(c) $-\text{NO}_2$ donate electrons at meta position
(d) $-\text{NO}_2$ withdraws electrons from ortho and para positions

78. In the reaction:

- (a) C_2H_4 (b) $\text{CH}_3\text{CH}_2\text{OCH}_2\text{CH}_3$
(c) $\text{CH}_3\text{CH}_2\text{OSO}_3\text{H}$ (d) 

79. Which of the following compound is most acidic?

- (a) $\text{Cl}-\text{CH}_2-\text{CH}_2-\text{OH}$ (b) 
(c)  (d) 

80. Benzene carbaldehyde is reacted with concentrated NaOH solution to give the products A and B the product A can be used as food preservative and the product B is an aromatic hydroxyl compound where OH group is linked to sp^3 hybridised carbon atom next to Benzene ring. The products A and B are respectively,

- (a) Sodium benzoate and phenol
(b) Sodium benzoate and phenyl methanol
(c) Sodium benzoate and cresol
(d) Sodium benzoate and picric acid

81. The reaction which involves dichlorocarbene as an electrophile is,

- (a) Reimer-Tiemann reaction
(b) Kolbe's reaction

- (c) Friedel-Craft's acylation
(d) Fittig's reaction

82. Ethanol is converted into ethoxy ethane,

- (a) By heating excess of ethanol with conc H_2SO_4 at 140°C
(b) By heating Ethanol with excess of conc H_2SO_4 at 443 K.
(c) By treating with conc H_2SO_4 at room temperature.
(d) By treating with conc H_2SO_4 at 273 K.

83. An organic compound X is oxidized by using acidified $\text{K}_2\text{Cr}_2\text{O}_7$ solution. The product obtained reacts with phenyl hydrazine but does not answer silver mirror test. The compound X is,

- (a) 2-propanol (b) Ethanal
(c) Ethanol (d) $\text{CH}_3\text{CH}_2\text{CH}_3$

84. Predict the product 'C' in the following series of reactions:

- (a) 
(b) $\text{CH}_3\text{CH}(\text{OH})\text{C}_6\text{H}_5$
(c) $\text{CH}_3\text{CH}(\text{OH})\text{C}_2\text{H}_5$
(d) $(\text{CH}_3)_2\text{C}(\text{OH})\text{C}_6\text{H}_5$

85. The number of oxygen atoms in $4.4\text{gm}_{\text{gm}}^{\text{CO}_2}$ is,

- (a) 1.2×10^{23} (b) 6×10^{22}
(c) 6×10^{23} (d) 12×10^{23}

86. If the bond energies of $\text{H}-\text{H}$, $\text{Br}-\text{Br}$ and $\text{H}-\text{Br}$ are 433, 192 and 364 kJ mol^{-1} respectively, then ΔH° for the reaction:

- (a) -261 kJ (b) +103 kJ
(c) +261 kJ (d) -103 kJ

87. In the reaction ; $\text{Fe}(\text{OH})_{3(\text{s})} \rightleftharpoons \text{Fe}^{3+}(\text{aq}) + 3\text{OH}^{-}(\text{aq})$, if the concentration of OH^{-} ions is decreased by $\frac{1}{4}$ times, then the equilibrium concentration of Fe^{3+} will increase by,

- (a) 8 times (b) 16 times
(c) 64 times (d) 4 times

88. The correct statement regarding entropy is,

- (a) At absolute zero temperature, entropy of a perfectly crystalline solid is zero.
(b) At absolute zero temperature, the entropy of a perfectly crystalline substance is +Ve.
(c) At absolute zero temperature, the entropy of all crystalline substances is zero.

(d) At 0°C, the entropy of a perfect crystalline solid is zero.

89. Equilibrium constants K_1 and K_2 for the following equilibrium

Are related as:

(a) $K_1 = \sqrt{K_2}$ (b) $K_2 = \frac{1}{K_1}$
 (c) $K_1 = 2 K_2$ (d) $K_2 = \left[\frac{1}{K_1} \right]^2$

90. Van-Arkel method of refining Zirconium involves,

(a) removing all oxygen and nitrogen impurities

(b) removing CO impurity

(c) removing Hydrogen impurity

(d) removing silica impurity

91. The composition of 'copper matte' is,

92. The complex formed when Al_2O_3 is leached from Bauxite using concentrated NaOH solution is ,

93. The property which is not true about Fluorine is,

(a) Most of its reactions are exothermic

(b) It forms only one oxo acid

(c) Highest electronegativity

(d) High F-F bond dissociation enthalpy.

94. Which is true regarding nitrogen?

(a) Less electronegative

(b) Has low ionization enthalpy

(c) d-orbitals are available

(d) Ability to form $p\pi - p\pi$ bonds with it self

95. The shape of XeF_6 is,

(a) Square planar (b) Distorted octahedral

(c) Square pyramidal (d) Pyramidal

96. The number of isomers possible for the octahedral complex $[\text{CoCl}_2(\text{en})(\text{NH}_3)_2]^+$ is,

(a) Two (b) Three

(c) No isomer (d) Four isomers

97. CO is a stronger ligand than Cl^- , because

(a) CO is a neutral molecule.

(b) CO has π -bonds

(c) CO is poisonous.

(d) CO is more reactive

98. The bivalent metal ion having maximum paramagnetic behavior among the first transition series elements is,

- (a) Mn^{2+} (b) Cu^{2+}
(c) Sc^{2+} (d) Cu^{+}

99. When a brown compound of Mn(A) is treated with HCl, it gives a gas (B) The gas (B) taken in excess reacts with NH_3 to give an explosive compound(C).

The compounds A, B and C are;

- (a) $\text{A} = \text{MnO}_2$, $\text{B} = \text{Cl}_2$, $\text{C} = \text{NCl}_3$
(b) $\text{A} = \text{MnO}$, $\text{B} = \text{Cl}_2$, $\text{C} = \text{NH}_4\text{Cl}$
(c) $\text{A} = \text{Mn}_3\text{O}_4$, $\text{B} = \text{Cl}_2$, $\text{C} = \text{NCl}_3$
(d) $\text{A} = \text{MnO}_3$, $\text{B} = \text{Cl}_2$, $\text{C} = \text{NCl}_2$

100. Mn^{2+} compounds are more stable than Fe^{2+} compounds towards oxidation their +3 state, because

- (a) Mn^{2+} is more stable with high 3rd Ionisation energy
(b) Mn^{2+} is bigger in size
(c) Mn^{2+} has completely filled d-orbitals
(d) Mn^{2+} does not exist

101. Which of the following sequence is correct regarding field strength of ligands as per spectrochemical series?

- (a) $\text{SCN}^- < \text{F}^- < \text{CN}^- < \text{CO}$
(b) $\text{F}^- < \text{SCN}^- < \text{CN}^- < \text{CO}$
(c) $\text{CN}^- < \text{F}^- < \text{CO} < \text{SCN}^-$
(d) $\text{SCN}^- < \text{CO} < \text{F}^- < \text{CN}^-$

102. As per IUPAC norms, the name of the complex $[\text{Co}(\text{en})_2(\text{ONO})\text{Cl}]\text{Cl}$ is

- (a) Chlorido bis (ethane-1, 2-diamine) nitro-o-cobalt (III) chloride
(b) Chloro bis (ethylene diamine) nitro-o-cobalt (III) chloride.
(c) Chlorido di (ethylene diamine) nitro cobalt (III) chloride.
(d) Chloro ethylene diamine nitro-o-cobalt (III) chloride.

103. In the following sequence of reactions;

The compound A is

- (a) Propane nitrile (b) Ethane nitrile
(c) CH_3NO_2 (d) CH_3NC

104. An organic compound A on reduction gives compound B, which on reaction with trichloro methane and caustic potash forms (C) The compound ' C ' on catalytic reduction gives N methyl benzenamine, the compound ' A ' is,

- (a) Nitrobenzene (b) Nitromethane
(c) Methanamine (d) Benzenamine

105. Which of the following gives positive Fehling's solution test?

- (a) Sucrose (b) Glucose
(c) Fats (d) Protein

106. A liquid can exist only,

- (a) Between triple point and critical point
(b) At any temperature above melting point
(c) Between melting point and critical point

(d) Between boiling and melting points.

107. The energy of electron in the n^{th} Bohr orbit of H-atom is

- (a) $\frac{-13.6}{n^2}$ eV (b) $\frac{-13.6}{n}$ eV
(c) $\frac{-13.6}{n^4}$ eV (d) $\frac{-13.6}{n^3}$ eV

108. Consider the following sets of quantum numbers:

Which of the below setting is not permissible arrangement of electrons in an atom?

	n	l	m	s
a.	4	0	0	$-\frac{1}{2}$
b.	5	3	0	$+\frac{1}{2}$
c.	3	2	-2	$-\frac{1}{2}$
d.	3	2	-3	$+\frac{1}{2}$

109. The increasing order of bond order O_2 , O_2^+ , O_2^- and O_2^{2-} is

- (a) O_2^+ , O_2 , O_2^- , O_2^{2-} (b) O_2^{2-} , O_2^- , O_2^+ , O_2
(c) O_2 , O_2^+ , O_2^- , O_2^{2-} (d) O_2^{2-} , O_2^- , O_2 , O_2^+

110. HCl gas is covalent and NaCl is an ionic compound This is because

- (a) Sodium is highly electro +Ve
(b) Hydrogen is a non-metal.
(c) HCl is a gas
(d) Electronegativity difference between H and Cl is less than 2.1.

111. Which of the following is not true?

- (a) In vulcanization, the rubber becomes harder and stronger.
(b) Natural rubber has 'trans' configuration at every double bond
(c) Buna-S is a co-polymer of Butene and styrene.
(d) Natural rubber is 1,4 -polymer of isoprene.

112. Which of the following is a polyimide?

- (a) Nylon-6,6 (b) Terylene
(c) Polythene (d) Buna-S

113. Which of the following is correct about H-bonding in DNA?

- (a) A - T, G - C (b) A-G, T-C
(c) G - T, A - C (d) A - A, T - T

114. Which of the following is employed as Tranquilizer?

- (a) Equanil (b) Naproxen
(c) Tetracyclin (d) Dettol

115. Reactivity of order of halides for dehydrohalogenation is

- (a) $\text{R} - \text{F} > \text{R} - \text{Cl} > \text{R} - \text{Br} > \text{R} - \text{I}$
(b) $\text{R} - \text{I} > \text{R} - \text{Br} > \text{R} - \text{Cl} > \text{R} - \text{F}$
(c) $\text{R} - \text{I} > \text{R} - \text{Cl} > \text{R} - \text{Br} > \text{R} - \text{F}$
(d) $\text{R} - \text{F} > \text{R} - \text{I} > \text{R} - \text{Br} > \text{R} - \text{Cl}$

116. Main axis of diatomic molecule is Z. The orbitals P_x and P_y overlap to form

- (a) π -molecular orbital
(b) σ -molecular orbital

- (c) δ -molecular orbital
(d) No bond is formed
117. The hybridisation of C in diamond, graphite and ethyne is in the order
(a) sp^3, sp, sp^2 (b) sp^3, sp^2, sp
(c) sp, sp^2, sp^3 (d) sp^2, sp^3, sp
118. A miscible mixture of $C_6H_6 + CHCl_3$ can be separated by
(a) Sublimation (b) Distillation
(c) Filtration (d) Crystallisation
119. An organic compound contains C = 40%, H = 13.33% and N = 46.67%. Its empirical formula is
(a) C_2H_2N (b) C_3H_7N
(c) CH_4N (d) CHN
120. Electrophile that participates in nitration of benzene is
(a) NO^+ (b) NO_2^+
(c) NO (d) NO_3^-

Mathematics

121. The Set A has 4 elements and the set B has 5 elements then the number of injective mappings that can be defined from A to B is
(a) 144 (b) 72
(c) 60 (d) 120
122. Let $f: R \rightarrow R$ be defined by $f(x) = 2x + 6$ which is a bijective mapping then $f^{-1}(x)$ is given by A
(a) $\frac{x}{2} - 3$ (b) $2x + 6$
(c) $x - 3$ (d) $6x + 2$
123. Let $*$ be binary operation defined on R by $a * b = \frac{a+b}{4} \forall a, b \in R$ then the operation $*$ is
(a) Commutative and Associative
(b) Commutative but not Associative
(c) Associative but not Commutative
(d) Neither Associative nor Commutative
124. The value of $\sin^{-1}\left(\cos \frac{53\pi}{5}\right)$
(a) $\frac{3\pi}{5}$ (b) $\frac{-3\pi}{5}$
(c) $\frac{\pi}{10}$ (d) $\frac{-\pi}{10}$
125. If $3\tan^{-1}x + \cot^{-1}x = \pi$ then x equal to
(a) 0 (b) 1
(c) -1 (d) $1/2$
126. The simplified form of $\tan^{-1}\left(\frac{x}{y}\right) - \tan^{-1}\left(\frac{x-y}{x+y}\right)$ is equal to
(a) 0 (b) $\frac{\pi}{4}$
(c) $\frac{\pi}{2}$ (d) π
127. If xyz are all different and not equal to zero and $\begin{vmatrix} 1+x & 1 & 1 \\ 1 & 1+y & 1 \\ 1 & 1 & 1+z \end{vmatrix} = 0$ then the value of $x^{-1} + y^{-1} + z^{-1}$ is equal to
(a) xyz (b) $x^{-1}y^{-1}z^{-1}$
(c) $-x - y - z$ (d) -1
128. If A is any square matrix of order 3×3 then $|3A|$ is equal to
(a) $3|A|$ (b) $\frac{1}{3}|A|$
(c) $27|A|$ (d) $9|A|$
129. If $y = e^{\sin^{-1}(t^2-1)} \&_x = e^{\sec^{-1}\left(\frac{1}{t^2-1}\right)}$ then $\frac{dy}{dx}$ is equal to
(a) $\frac{x}{y}$ (b) $\frac{-y}{x}$
(c) $\frac{y}{x}$ (d) $\frac{-x}{y}$

130. If $A = \frac{1}{\pi} \begin{bmatrix} \sin^{-1}(\pi x) & \tan^{-1}\left(\frac{x}{\pi}\right) \\ \sin^{-1}\left(\frac{x}{\pi}\right) & \cot^{-1}(\pi x) \end{bmatrix}$, $B = \frac{1}{\pi} \begin{bmatrix} -\cos^{-1}(\pi x) & \tan^{-1}\left(\frac{x}{\pi}\right) \\ \sin^{-1}\left(\frac{x}{\pi}\right) & -\tan^{-1}(\pi x) \end{bmatrix}$

- (a) I (b) 0
(c) 2I (d) $\frac{1}{2}I$

131. If $x^y = e^{x-y}$ then $\frac{dy}{dx}$ is equal to

- (a) $\frac{\log x}{\log(x-y)}$ (b) $\frac{e^x}{x^{x-y}}$
(c) $\frac{\log x}{(1+\log x)^2}$ (d) $\frac{1}{y} - \frac{1}{x-y}$

132. If A is a matrix of order $m \times n$ and B is a matrix such that AB' and B'A are both defined, the order of the matrix B is

- (a) $m \times m$ (b) $n \times n$
(c) $n \times m$ (d) $m \times n$

133. The value of $\int \frac{e^x(1+x)dx}{\cos^2(e^x \cdot x)}$ is equal to

- (a) $-\cot(e^x) + c$ (b) $\tan(e^x \cdot x) + c$
(c) $\tan(e^x) + c$ (d) $\cot(e^x) + c$

134. If x, y, z are not equal and $\neq 0, \neq 1$ the value of $\begin{vmatrix} \log x & \log y & \log z \\ \log 2x & \log 2y & \log 2z \\ \log 3x & \log 3y & \log 3z \end{vmatrix}$ is equal to

- (a) $\log(xyz)$ (b) $\log(6xyz)$
(c) 0 (d) $\log(x+y+z)$

135. The function $f(x) = [x]$ where $[x]$ the greatest integer function, is continuous at

- (a) 1.5 (b) 4
(c) 1 (d) -2

136. The value of $\int \frac{e^x(x^2 \tan^{-1} x + \tan^{-1} x + 1)}{x^2 + 1} dx$ is equal to

- (a) $e^{\tan^{-1} x} + c$ (b) $\tan^{-1}(e^x) + c$
(c) $\tan^{-1}(x^e) + c$ (d) $e^{\tan^{-1} x} + c$

137. If $2\vec{a} \cdot \vec{b} = |\vec{a}| \cdot |\vec{b}|$ then the angle of between $\vec{a}$ & $\vec{b}$ is

- (a) 30° (b) 0°
(c) 90° (d) 60°

138. If $x^m y^n = (x+y)^{(m+n)}$ then $\frac{dy}{dx}$ is equal to

- (a) $\frac{x+y}{xy}$ (b) xy
(c) 0 (d) $\frac{y}{x}$

139. The general solution of $\cot \theta + \tan \theta = 2$ is

- (a) $\theta = \frac{n\pi}{2} + (-1)^n \frac{\pi}{8}$
(b) $\frac{n\pi}{2} + (-1)^n \frac{\pi}{4}$
(c) $\theta = \frac{n\pi}{2} + (-1)^n \frac{\pi}{6}$
(d) $\theta = n\pi + (-1)^n \pi/8$

140. The value of $\int_{-\pi/4}^{\pi/4} \sin^{103} x \cdot \cos^{101} x dx$ is

- (a) $\left(\frac{\pi}{4}\right)^{103}$ (b) $\left(\frac{\pi}{4}\right)^{101}$
(c) 2 (d) 0

141. The length of latus rectum of the parabola $4y^2 + 3x + 3y + 1 = 0$ is

- (a) $\frac{4}{3}$ (b) 7
(c) 12 (d) $\frac{3}{4}$

142. The value of $\int \frac{e^{6\log x} - e^{5\log x}}{e^{4\log x} - e^{3\log x}} dx$ is equal to

- (a) 0 (b) $\frac{x^3}{3} + c$
(c) $\frac{3}{x^3} + c$ (d) $\frac{1}{x} + c$

143. The differential coefficient of $\log_{10} x$ with respect to $\log_x 10$ is

- (a) 1 (b) $-(\log_{10} x)^2$
(c) $(\log_x 10)^2$ (d) $\frac{x^2}{100}$

144. The slope of the tangent to the curve $x = t^2 + 3t - 8, y = 2t^2 - 2t - 5$ at the point $(2, -1)$ is

- (a) $\frac{22}{7}$ (b) $\frac{6}{7}$
(c) $\frac{7}{6}$ (d) $\frac{-6}{7}$

145. The real part of $(1 - \cos \theta + i \sin \theta)^{-1}$ is

- (a) $\frac{1}{2}$ (b) $\frac{1}{1 + \cos \theta}$
(c) $\tan \frac{\theta}{2}$ (d) $\cot \frac{\theta}{2}$

146. $\int_0^{\pi/2} \frac{\sin^{1000} x dx}{\sin^{1000} x + \cos^{1000} x}$ is equal to

- (a) 1000 (b) 1
(c) $\frac{\pi}{2}$ (d) $\frac{\pi}{4}$

147. If $1 + \sin \theta + \sin^2 \theta + \dots$ upto $\infty = 2\sqrt{3} + 4$ then $\theta =$

- (a) $\frac{\pi}{6}$ (b) $\frac{\pi}{4}$
(c) $\frac{\pi}{3}$ (d) $\frac{3\pi}{4}$

148. $\lim_{x \rightarrow 0} \frac{xe^x - \sin x}{x}$ is equal to

- (a) 3 (b) 1
(c) 0 (d) 2

149. If $\tan^{-1}(x^2 + y^2) = \alpha$ then $\frac{dy}{dx}$ is equal to

- (a) $\frac{-x}{y}$ (b) xy
(c) $\frac{x}{y}$ (d) $-xy$

150. The simplified form of $i^n + i^{n+1} + i^{n+2} + i^{n+3}$ is

- (a) 0 (b) 1
(c) -1 (d) i

151. The two curves $x^3 - 3xy^2 + 2 = 0$ and $3x^2y - y^3 = 2$

- (a) Touch each other
(b) Cut each other at right angle
(c) Cut at an angle $\pi/3$
(d) Cut at an angle $\pi/4$

152. The equation of the normal to the curve $y(1 + x^2) = 2 - x$ where the tangent crosses x-axis is

- (a) $5x - y - 10 = 0$ (b) $x - 5y - 10 = 0$
(c) $5x + y + 10 = 0$ (d) $x + 5y + 10 = 0$

153. The maximum value of $\left(\frac{1}{x}\right)^x$ is.

- (a) e (b) e^e
(c) $e^{\frac{1}{e}}$ (d) $\left(\frac{1}{e}\right)^e$

154. The solution for the differential equation $\frac{dy}{y} + \frac{dx}{y} = 0$ is.

- (a) $\frac{1}{y} + \frac{1}{x} = c$ (b) $\log x \cdot \log y = c$
(c) $xy = c$ (d) $x + y = c$

155. The order and degree of the differential equation $\left[1 + \left(\frac{dy}{dx}\right)^2 + \sin\left(\frac{dy}{dx}\right)^{\frac{3}{4}} = \frac{d^2y}{dx^2}\right]$

- (a) Order = 2 Degree = 4
 (b) Order = 2 Degree = 3
 (c) Order = 2 Degree = 3/4
 (d) Order = 2 Degree = not found

156. If $\vec{a}$ and $\vec{b}$ are unit vectors then what is the angle between $\vec{a}$ and $\vec{b}$ for $\sqrt{3}\vec{a} - \vec{b}$ to be unit vector?

- (a) 30° (b) 45°
 (c) 60° (d) 90°

157. The sum of 1st n terms of the series

$$\frac{1^2}{1} + \frac{1^2+2^2}{1+2} + \frac{1^2+2^2+3^2}{1+2+3} + \dots$$

(a) $\frac{n+2}{3}$ (b) $\frac{n(n+2)}{3}$
 (c) $\frac{n(n-2)}{3}$ (d) $\frac{n(n-2)}{6}$

158. The 11th term in the expansion of $\left(x + \frac{1}{\sqrt{x}}\right)^{14}$ is

- (a) $\frac{999}{x}$ (b) $\frac{1001}{x}$
 (c) I (d) $\frac{x}{1001}$

159. Suppose $\vec{a} + \vec{b} + \vec{c} = \mathbf{0}$, $|\vec{a}| = 3$, $|\vec{b}| = 5$, $|\vec{c}| = 7$, then the angle between $\vec{a}$ & $\vec{b}$ is

- (a) π (b) $\frac{\pi}{2}$
 (c) $\frac{\pi}{3}$ (d) $\frac{\pi}{4}$

160. If $a = 3$, $b = 4$, $c = 5$ each one of $\vec{a}$, $\vec{b}$ & $\vec{c}$ is perpendicular to the sum of the remaining then $|\vec{a} + \vec{b} + \vec{c}|$ is equal to

- (a) $\frac{5}{\sqrt{2}}$ (b) $\frac{2}{\sqrt{5}}$
 (c) $5\sqrt{2}$ (d) $\sqrt{5}$

161. If the straight lines $2x + 3y - 3 = 0$ and $x + ky + 7 = 0$ are perpendicular, then the value of k is

- (a) $\frac{2}{3}$ (b) $\frac{3}{2}$
 (c) $\frac{-2}{3}$ (d) $\frac{-3}{2}$

162. The rate of change of area of a circle with respect to its radius at $r = 2$ cms is

- (a) 4 (b) 2π
 (c) 2 (d) 4π

163. The value of $\tan \frac{\pi}{8}$ is equal to

- (a) $\frac{1}{2}$ (b) $\sqrt{2} + 1$
 (c) $\frac{1}{\sqrt{2}+1}$ (d) $1 - \sqrt{2}$

164. Area lying between the curves $y^2 = 2x$ and $y = x$ is

- (a) $\frac{2}{3}$ sq. Units (b) $\frac{1}{3}$ sq. units
 (c) $\frac{1}{4}$ sq. Units (d) $\frac{3}{4}$ sq. units

165. If $P(A \cap B) = \frac{7}{10}$ and $P(B) = \frac{17}{20}$, where P stands for probability then $P(A | B)$ is equal to

- (a) $\frac{7}{8}$ (b) $\frac{17}{20}$
 (c) $\frac{14}{17}$ (d) $\frac{1}{8}$

166. The coefficient of variation of two distributions are 60 and 70. The standard deviation are 21 and 16 respectively, then their mean is

- (a) 35 (b) 23
 (c) 28.25 (d) 22.85

167. Two cards are drawn at random from a pack of 52 cards. The probability of these two being "Aces" is

- (a) $\frac{1}{26}$ (b) $\frac{1}{221}$
(c) $\frac{1}{2}$ (d) $\frac{1}{13}$

168. If $\sin^{-1} x + \sin^{-1} y = \frac{\pi}{2}$, then x^2 is equal to

- (a) $1 - y^2$ (b) y^2
(c) 0 (d) $\sqrt{1 - y}$

169. The value of $\int_2^8 \frac{\sqrt{10-x}}{\sqrt{x}+\sqrt{10-x}} dx$ is

- (a) 10 (b) 0
(c) 8 (d) 3

170. The contra positive of the converse of the statement "If x is a prime number then x is odd" is

- (a) If x is not a prime number then x is odd
(b) If x is not an odd number then x is not a prime number.
(c) If x is a prime number then it is not odd
(d) If x is not a prime number then x is not an odd

171. Two dice are thrown simultaneously, the probability of obtaining a total score of 5 is

- (a) $\frac{1}{18}$ (b) $\frac{1}{12}$
(c) $\frac{1}{9}$ (d) $\frac{1}{6}$

172. If $A = \begin{bmatrix} \cos 2\theta & -\sin 2\theta \\ \sin 2\theta & \cos 2\theta \end{bmatrix}$ and $A + A^T = I$,

Where I is the unit matrix of 2×2 & A^T is the transpose of A, then the value of θ is equal to.

- (a) $\frac{\pi}{6}$ (b) $\frac{\pi}{3}$
(c) π (d) $\frac{3\pi}{2}$

173. If $A = \begin{bmatrix} 3 & 1 \\ -1 & 2 \end{bmatrix}$ then $A^2 - 5A$ is equal to

- (a) I (b) -I
(c) 7I (d) -7I

174. The value of x if $x(\hat{i} + \hat{j} + \hat{k})$ is a unit vector is

- (a) $\pm \frac{1}{\sqrt{3}}$ (b) $\pm \sqrt{3}$
(c) ± 3 (d) $\pm \frac{1}{3}$

175. If $x = 2 + 3\cos \theta$ and $y = 1 - 3\sin \theta$ represent a circle then the Centre and radius is

- (a) (2,1),9 (b) (2,1),3
(c) (1,2), $\frac{1}{3}$ (d) (-2, -1),3

176. The vector equation of the plane which is at a distance of $\frac{3}{\sqrt{14}}$ from the origin and the normal from the origin is $2\hat{i} - 3\hat{j} + \hat{k}$ is

- (a) $\vec{r} \cdot (2\hat{i} - 3\hat{j} + \hat{k}) = 3$ (b) $\vec{r} \cdot (\hat{i} + \hat{j} + \hat{k}) = 9$
(c) $\vec{r} \cdot (\hat{i} + 2\hat{j}) = 3$ (d) $\vec{r} \cdot (2\hat{i} + \hat{k}) = 3$

177. Find the co-ordinates of the foot of the perpendicular drawn from the origin to the plane $5y + 8 = 0$:

- (a) $(0, -\frac{18}{5}, 2)$ (b) $(0, \frac{8}{5}, 0)$
(c) $(\frac{8}{25}, 0, 0)$ (d) $(0, -\frac{8}{5}, 0)$

178. If $\cos \alpha, \cos \beta, \cos \gamma$ are the direction cosines of a vector $\vec{a}$ then $\cos 2\alpha + \cos 2\beta + \cos 2\gamma$ is equal to
 (a) 2 (b) 3
 (c) -1 (d) 0
179. The value of the $\sin 1^\circ + \sin 2^\circ + \dots + \sin 359^\circ$ is equal to
 (a) 0 (b) 1
 (c) -1 (d) 180
180. Integrating factor of $x \frac{dy}{dx} - y = x^4 - 3x$ is
 (a) x (b) $\log x$
 (c) $\frac{1}{x}$ (d) $-x$

Biology

181. In a taxonomic hierarchy, the number of common characters will increase as we go from
 (a) Species to Kingdom
 (b) Kingdom to Species
 (c) Class to Order
 (d) Genus to Species
182. Which one of the following statements is correct?
 (a) Chasmogamous flowers always exhibit geitonogamy.
 (b) Cleistogamous flowers always exhibit autogamy.
 (c) Chasmogamous flowers never exhibit autogamy.
 (d) Cleistogamous flowers exhibit both autogamy and geitonogamy.
183. E. coli bacteria grew in $^{15}\text{NH}_4\text{Cl}$ medium for several generations are allowed to grow in $^{14}\text{NH}_4\text{Cl}$ medium. After 2 generations, the bacteria are isolated from the medium and DNA of bacteria centrifuged in CsCl . The result of the density gradient of DNA is.
 (a) only hybrid DNA
 (b) both hybrid and heavy DNA
 (c) both heavy and light DNA
 (d) both hybrid and light DNA
184. In which type of interaction, both the interacting organisms do not live close together?
 (a) Predation (b) Parasitism
 (c) Mutualism (d) Competition
185. Facultative absorption of water from primary urine is influenced by the hormone
 (a) Androgens (b) Epinephrine
 (c) Vasopressin (d) Thyroxine
186. In a dithecous anther, each pollen sac contains 1000 MM(C) What is the total number of pollen-grains produced by the anther?
 (a) 4,000 (b) 8,000
 (c) 16,000 (d) 32,000
187. Identify the correct equation for Hardy-Weinberg law.
 (a) $p + q = 1$ (b) $p - q = 1$
 (c) $(p + q)^2 = 1$ (d) $(p - q)^2 = 1$
188. The relative contribution of various green -house gases to total global warming is given in the following diagram:

Identify the greenhouse gases.

- (a) A = CO₂; B = CH₄; C = CFCs; D = N₂O
 (b) A = CO₂; B = CFCs; C = CH₄; D = N₂O
 (c) A = CFCs; B = CO₂; C = CH₄; D = N₂O
 (d) A = CFCs; B = CH₄; C = CO₂; D = N₂O

189. In plants, lateral roots arise from

- (a) epidermis (b) hypodermis
 (c) endodermis (d) pericycle

190. Find the sequence of binding of the following aminoacyl t-RNA complexes during translation to m-RNA transcribed by a DNA segment having the base sequences 3'TACATGGGTCCG5'

Choose the answer showing the correct order of alphabets.

- (a) A, B, D, C (b) B, A, D, C
 (c) C, D, B, A (d) D, C, A, B

191. Match the plant structures given in the column-I with their plants given in the column-II.

Column-I	Column-II
(A) Prothallus	p. Bryophytes
(B) Microsporophyll	q. Pteridophytes
(C) Protonema	r. Angiosperms
(D) PEN	s. Gymnosperms

- (a) A-r, B-p, C-s, D-q (b) A-s, B-r, C-p, D-q
 (c) A-q, B-s, C-r, D-p (d) A-q, B-s, C-p, D-r

192. Snow blindness is caused due to

- (a) Ozone hole (b) Nuclear winter
- (c) Acid rain (d) Green- house effect

193. A person who has allergy, the type of antibody produced in his body is

- (a) IgA (b) IgG
- (c) IgE (d) IgM

194. Elution means

- (a) Separation of DNA fragments on agarose gel.
- (b) Cutting and extraction of DNA bands from the agarose gel.
- (c) Making the DNA bands visible under UV radiation.
- (d) Isolating alien DNA from the choice organism.

195. The edible part of the fruit of apple is

- (a) Thalamus (b) Pericarp
- (c) Endocarp (d) Involucre

196. Identify a micro-organism that can produce biomass of protein.

- (a) *Monascus purpureus*
- (b) *Aspergillus niger*
- (c) *Methylophilus methylotrophus*
- (d) *Trichoderma polysporum*

197. What is the function of the enzyme 'recombinase' during meiosis?

- (a) Formation of synaptonemal complex
- (b) Crossing over between non-sister chromatids
- (c) Condensation of chromosomes
- (d) Alignment of bivalent chromosomes on equatorial plate

198. Identify from the following group of animals, which exhibit oestrous cycle.

- (a) Lion, deer, dog and cow
- (b) Cow, monkey, elephant and ape
- (c) Monkey, ape, man and elephant
- (d) Lion, dog, monkey and ape

199. The codons UUU and UUC codes for phenylalanine only. This feature of genetic code is called

- (a) comma less (b) non-overlapping
- (c) degenerate (d) non-ambiguous

200. One of the following area is an example for secondary succession, if the succession takes place in/on

- (a) abandoned farm land
- (b) newly cooled lava
- (c) newly created pond
- (d) bare rock

- 201. A doctor identifies symptoms of nasal congestion, headache, sore throat, hoarseness, cough in a patient. The conclusion is that, the patient is infected by a pathogen**
(a) Adeno virus (b) Rhino virus
(c) Plasmodium (d) Salmonella
- 202. The puffed-up appearance of dough is due to fermentation by bacteria. Identify the gas liberated during the process.**
(a) Methane (b) Carbon dioxide
(c) Hydrogen sulphide (d) Ammonia
- 203. Most suitable method of introducing alien DNA into a plant cell is**
(a) biolistics (b) microinjection
(c) lipofection (d) heat shock method
- 204. Which one of these is not an accessory gland in male reproductive system?**
(a) Prostate gland (b) Seminal vesicle
(c) Cowper's gland (d) Bartholin's gland
- 205. Find the mismatch from the following pairs:**
(a) Divergent evolution → thorn of bougainvillia and tendril of cucurbita
(b) Adaptive radiation → Australian marsupials
(c) Natural selection → Industrial melanism
(d) Genetic drift → Constant gene frequency
- 206. What is the role of competitive inhibitor during enzyme action?**
(a) It enhances enzyme action.
(b) It declines the enzyme action.
(c) It alters the active site of the enzyme and prevents the binding of substrate.
(d) It inhibits breaking of chemical bonds of the substrate.
- 207. Some of the events occur during life cycle of plasmodium are given below. Identify the correct statement.**
(a) The sporozoites reproduce sexually in liver cells.
(b) The gametocytes develop in RBC
(c) Female mosquito takes up sporozoites with blood meal.
(d) When mosquito bites a man, gametocytes are injected
- 208. Read the following statements carefully and choose the correct statements:**
(A) In a transcription unit, the promoter located at the 5' end of coding strand
(B) The single strand DNA having the polarity 5' → 3' is the template strand
(C) RNA polymerase binds to the operator during transcription.
(D) single base DNA differences occur in humans are called Single Nucleotide Polymorphism (SNPs).
(a) Statements A and B (b) Statements B and C
(c) Statements B and D (d) Statements A and D
- 209. Amniocentesis is one of the methods**
(a) adapted for MTP

- (b) of birth control
- (c) for foetal sex determination
- (d) used for safe parturition

210. Connel's field experiment on the rocky sea coast of Scotland, where larger Barnacle balanus dominates the intertidal area and removes the smaller Barnacle cathamalus. This happened due to

- (a) Predation
- (b) Competition
- (c) Parasitism
- (d) Mutualism

211. Choose the incorrect statement from the following.

- (a) Tendons attach muscle to bone.
- (b) Ciliated epithelium is the modified columnar epithelium.
- (c) Adipose tissue is a type of dense connective tissue.
- (d) Cartilage is made up of chondrocytes.

212. Desired genes have been introduced into transgenic animals to obtain large scale production of useful biological products encoded by these genes. This approach is generally referred to as

- (a) hybridoma technology
- (b) molecular farming
- (c) gene therapy
- (d) down -stream processing

213. A plant is provided with ideal conditions for photosynthesis and supplied with isotope $^{14}\text{CO}_2$. When the products of the process are analysed carefully, what would be the nature of products?

- (a) Both glucose and oxygen are labelled
- (b) Only oxygen is labelled but glucose is normal.
- (c) Both glucose and oxygen are normal.
- (d) Only glucose is labelled and oxygen is normal.

214. Which among these is not a post fertilization event?

- (a) Gametogenesis
- (b) Embryogenesis
- (c) Fruit formation
- (d) Seed formation

215. Sarcomere is the functional unit of contraction in a muscle fibre. Identify the portion of myofibril that constitutes a sarcomere.

- (a) The portion of myofibril between two successive 'Z' line.
- (b) The portion of myofibril between two successive 'T' band
- (c) The portion of myofibril between two successive 'A' band
- (d) The portion of myofibril between two successive 'M' line.

216. Some desert beetles can survive on "metabolic water", without ever drinking liquid water which

- (a) Was produced as water in the organisms they eat.
- (b) Is absorbed from the air along with respiratory oxygen.
- (c) Is a breakdown product of pyruvate inside the mitochondria, along with carbon dioxide.
- (d) Is a breakdown product from glycolysis in the cytoplasm.

217. The gene disorder phenylketonuria is an example for

- (a) Polygenic inheritance
- (b) Pleiotropy
- (c) Multiple allelism
- (d) Multiple factor

218. A population is correctly defined as having which of the following characteristics?

(A) Inhabiting the same geography area

(B) Individuals belonging to same species

(C) Possessing a constant and uniform density and dispersion

- (a) A and B only
- (b) B and C only
- (c) A and C only
- (d) B only

219. Choose the correct sequence of events occur in human reproduction.

- (a) Gametogenesis → gestation → insemination → fertilization → implantation → parturition
- (b) Gametogenesis → insemination → gestation → implantation → fertilization → parturition
- (c) Gametogenesis → insemination → fertilization → implantation → gestation → parturition
- (d) Gestation → gametogenesis → insemination → implantation → fertilization → parturition

220. In a polysaccharide, number of monosaccharides are linked by

- (a) peptide bond
- (b) phosphoester bond
- (c) glycosidic bond
- (d) hydrogen bond

221. 'A' and 'B' are the two adjacent living cells. The cell 'A' has solute potential (ψ_s) of -9 bars and pressure potential (ψ_p) of 4 bars, whereas cell 'B' has solute potential (ψ_s) of -8 bars and pressure potential (ψ_p) of 5 bars. What will be the direction of water movement between these cells?

- (a) Cell A to Cell B
- (b) Cell B to Cell A
- (c) Do not move in any direction.
- (d) Moves in both the directions.

222. Which one of the following statement is wrong with respect to separation of DNA fragments on gel electrophoresis?

- (a) The DNA fragments move towards anode under electric field through the matrix.
- (b) The commonly used matrix is agarose gel.
- (c) The DNA fragments resolve according to their size.
- (d) None of these

223. The rate of formation of new organic matter by deer in a forest ecosystem is called

- (a) Primary productivity
- (b) Secondary productivity
- (c) Standing crop
- (d) Net Primary productivity

224. Digestion of proteins is incomplete in the absence of enterokinase, because

- (a) Pepsinogen is not converted into pepsin.
- (b) Chymotrypsinogen is not converted into chymotrypsin.
- (c) Trypsinogen is not converted into trypsin.

(d) Prorennin is not converted into rennin.

225. The primary treatment of sewage water involves

- (a) sludge digestion
- (b) aerobic bacterial activity
- (c) anaerobic bacterial activity
- (d) filtration and sedimentation

226. From the following pedigree chart of a family, one can make an analysis that,

- (a) It is an autosomal dominant trait.
- (b) It is an autosomal recessive trait.
- (c) It is an allosomal dominant trait.
- (d) It is an allosomal recessive trait.

227. Off springs formed during sexual reproduction exhibits more variation than those formed by asexual method, because

- (a) Genetic material comes from two different individuals.
- (b) Greater amount of DNA is involved
- (c) Sexual reproduction is more complicated
- (d) Genetic material comes from male parent.

228. Pick the hormone which is not secreted by human placenta

- (a) hCG
- (b) hPL
- (c) Prolactin
- (d) Estrogen

229. The phenomenon called 'Apical dominance' in plants is due to a phytohormone

- (a) Auxins
- (b) Gibberellins
- (c) Cytokinins
- (d) ABA

230. Plants obtained through tissue culture are genetically identical and they are obtained by somatic cells. What do you call them?

- (a) Soma clones
- (b) Mono clones
- (c) Somatic hybrids
- (d) Cross hybrids

231. A human male is heterozygous for autosomal genes 'A' and 'B'. He is also hemizygous for haemophilic gene 'h'. What percentage of sperms will carry 'abh' genotype?

- (a) 25%
- (b) 50%
- (c) 75%
- (d) None of these

232. All the following interactions are mutualism, except

- (a) association of algae and fungi in lichens
- (b) association of fungi and roots of higher plants in mycorrhiza
- (c) plant and animal relation for pollination
- (d) association of cattle egret and grazing cattle

233. The hormone 'melatonin' is secreted by the gland

- (a) Thyroid (b) Adrenal
(c) Pineal (d) Pituitary

234. A scrubber in the exhaust of a chemical industry removes

- (a) hydrogen sulphide (b) sulphur dioxide
(c) nitrous oxide (d) carbon monoxide

235. Lactational amenorrhea

- (a) prevents secretion of milk from breast
(b) prevents conception
(c) prevents secretion of prolactin
(d) prevents spermatogenesis

236. The gene for haemophilia is located on 'X' chromosome. Hence it is normally impossible for a

- (a) Haemophilic father to pass the gene to his daughter.
(b) Carrier mother to pass the gene to her daughter.
(c) Carrier mother to pass the gene to her son.
(d) Haemophilic father to pass the gene to his son.

237. Identify the incorrect statement from the following.

- (a) B-cells produce antibody.
(b) Interferons kill viruses.
(c) Response of T-cells is called cell mediated immunity.
(d) Macrophages are the phagocytic cells.

238. A person admitted to hospital as he had myocardial infarction. A cardiologist injecting him 'streptokinase', why?

- (a) It reduces hypertension.
(b) It reduces the level of blood cholesterol.
(c) It stimulates heart -beat.
(d) It acts as clot buster.

239. One of the breeding techniques useful to eliminate harmful recessive genes by selection is

- (a) Artificial insemination (b) Out-breeding
(c) In-breeding (d) MOET

240. Which one of the following statements is not correct about a plasmid?

- (a) It is a circular DND
(b) It has antibiotic resistant gene.
(c) It has the ability of autonomous replication.
(d) Its DNA is as long as chromosomal DNA
