

1. The bgcolor attribute describes the background color of an HTML page.
2. Cyber Laws are the laws that deal with legal issues related to the use of computers, the internet, and digital technologies.
They govern activities like online communication, data protection, electronic transactions, and cyber crimes (such as hacking, phishing, and identity theft).
In short: Cyber laws regulate behavior in cyberspace to protect users, data, and systems.
3. yes
4. We use a form in HTML to collect user input and send it to a server for processing.
In simple terms, an HTML form allows users to enter data like:
Text (name, email)
Passwords
Choices (radio buttons, checkboxes)
Files
Buttons (submit/reset)
The data entered in a form is usually sent to a server using GET or POST methods for actions like login, registration, search, or feedback.
Example uses of HTML forms:
Login page
Sign-up form
Contact form
Online surveys
One-line answer (exam-friendly):
HTML forms are used to collect user input and submit it to a server for processing.
5. The checked attribute shows a radio button selected by default.
6. A firewall is a network security system that monitors and controls network traffic according to predefined security rules. It acts as a barrier between a trusted internal network and an untrusted external network, such as the internet.
